HYDRO 80 Total efficiency

PERFORMANCE

- The Hydro 80 cuts and collects both long and short grass, without clogging. But this little workhorse does much more: for non-collection there is side discharge or rear ejection for longer grass. If you want a mulching mower - Hydro 80 does that too.
- Theoretical output up to 7200 sqm/h.
- Efficient even in long and wet grass.
- Perfect collect of leaves.
- Mulching kit delivered from series.
- Tight turning circle.
- 5 cutting height for a perfect mowing in all conditions: from 44 to 102 mm.

EXTREMELY COMPACT

Measuring 1.98 m x 0.82 m wide, Hydro 80 is easily transported in a truck or trailer. It can pass through most gateways and its tight turning circle makes it ideal for small or awkward areas. It mows close to walls and fences and is highly manoeuvrable.

COMFORT

- The hydrostatic gearbox enables to mow forward or reverse and stop instantly.
- Quality built for long-life and low maintenance, Hydro 80 has easy access to the engine and all working parts.
- All around visibility.
- Easy-to-reach controls.

ROBUSTNESS

- The engines used, derived from the most recent technologies, will ensure a very high quality work.
- Specially coated 60 mm tubular chassis designed for strength and long-life.

VERSATILE

- Mulching, cutting long grass mowing, snow clearing, to transportation... Hydro 80 can do everything!
